

RESOURCE CONFIGURATION IN
MULTI-MODAL DISTRIBUTED COMPUTING SYSTEMS

Abstract of the Disclosure

A method and system for configuring available resources in real-time to

5 automatically accommodate the needs of the system user in multi-modal distributed

computing system is disclosed. Information about the location or environment of a

wireless device is used, preferably in combination with user personal preferences and past

history to modify the behavior of the wireless device, including the selection of the most

appropriate mode of interaction with the device and the activation of applications thereon

10 as appropriate.
